UVSS

Under Vehicle Surveillance System

The Under Vehicle Surveillance System (UVSS) provides enhanced security monitoring for any access control point. The UVSS is designed to provide security personnel with a fixed or mobile screening system that automatically scans and records clear digital video images of the undercarriage of vehicles for any foreign objects that could potentially possess a security threat.

General Description:

UVSS Software is needed to have Zoom Function which zoom an image by pointing to a subject and changes the zoom ratio by scrolling to avoid overlooking objects concealed.
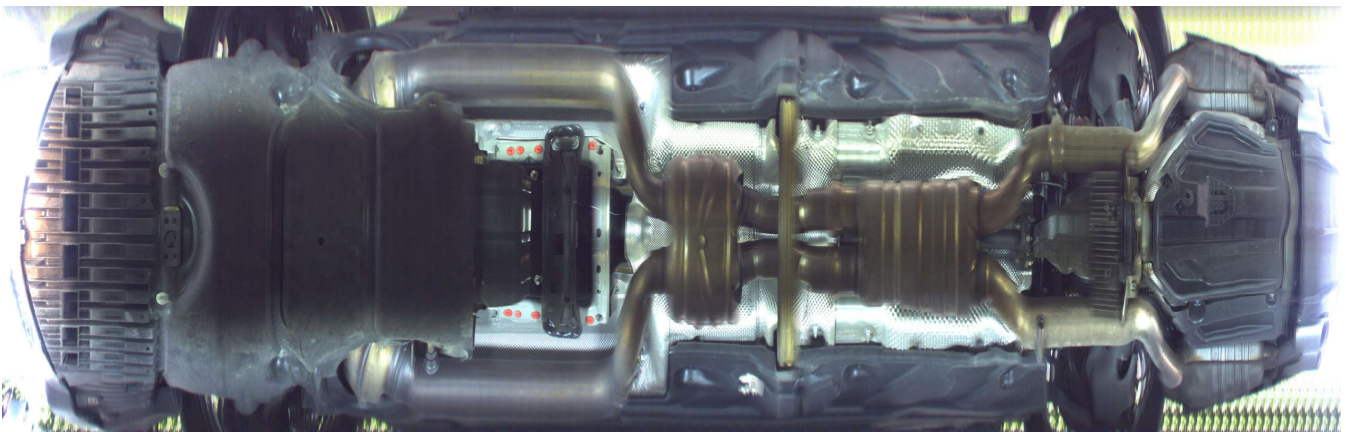

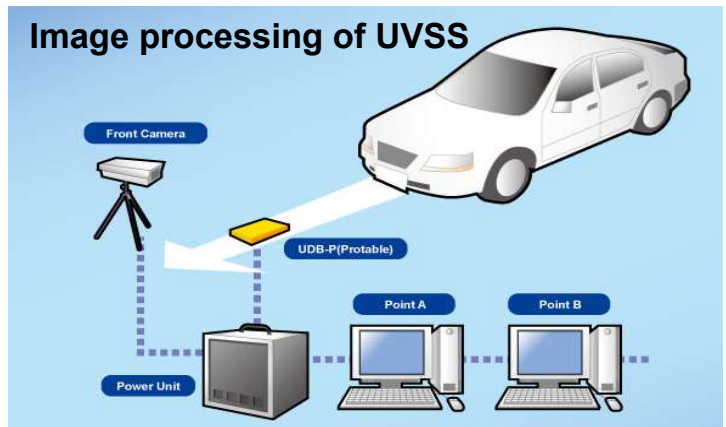

Bottom Main Camera

Image processing of UVSS

Front Camera

KAWASAKI KOGYOCO.,LTD

Key Features:

・ **Auto Capture Function**
The system automatically captures the images of under-vehicles as they pass the main camera, then images of both under and front-vehicles will be displayed on a screen in a few seconds.

・ **Zoom Function**
You can zoom an image by pointing to a subject and also change the zoom ratio by scrolling. This function can work for both under and front-vehicle images.

・ **Multiple views Monitoring Function**
The images of previous vehicles can be displayed by clicking a "Previous" button. Maximum three previous images can be displayed.
You can go back to the current image by clicking a "Next" button.

・ **Large Size Vehicle Display Function**
You can display an image of a large vehicle with a suitable viewing angle by clicking a "Large Vehicle" button.
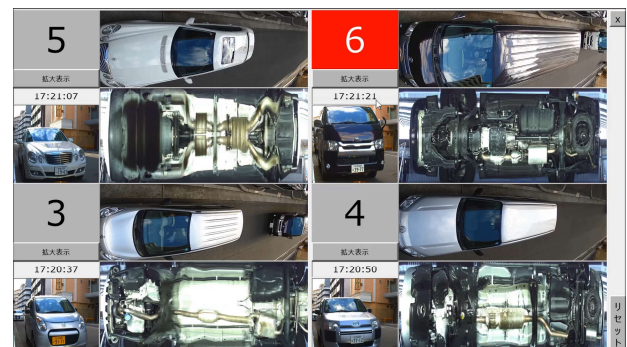

Optional:

・ Able to integrate with other security systems such as access control, vehicle license number plate recognition systems, etc.
・ User friendly and customizable software interface available to meet various levels of security.
